

LINEAR TILE CLEANING & MAINTENANCE

DAILY: Vacuum clean, mop. Vacuum up loose debris with a canister-type vacuum; do not use a roller-type vacuum---the roller may catch the carpeting and pull it out of the tile. After vacuuming, tiles can be damp mopped using a commercial detergent such as Spic-N-Span. Do not use a string mop---mop may get caught in aggressive carpeting strands.

Tiles can be mopped or scrubbed with a scrub brush. They can also be hosed down with a garden or commercial power washer and can be washed with a commercial detergent such as Spic-N-Span. Do not wax or use equipment to wash tiles that have been in contact with wax. Do not wax tiles.

Regular maintenance is necessary to retain the appearance of the tiles.
