

ALUMINUM/VINYL ROLL-UP MAT CLEANING INSTRUCTIONS

1. Daily, or as often as possible, remove dirt by sweeping along the width of the mat with a stiff bristled broom, removing the dirt from the sides of the mat. Daily vacuuming is also effective.
2. Vacuum the mat weekly; this should remove dirt and grit that has fallen within the carpet pile. Removing this dirt will greatly extend the life of the mat.
3. As needed, a complete cleaning should be performed. The mat should be cleaned as in steps 1 and 2 above. The mat should be rolled up and removed from the recess or its surface location and moved to a clean space. Beneath the mat should now be cleaned of all dirt and moisture. Clean mat with standard carpet cleaner materials, using a brush to remove excess dirt and stains. Allow the mat to dry or vacuum dry and then replace it in its original location. **Be careful in handling the mat; bending of the aluminum rails cannot be repaired.**
