

# CUSHION TILE

## INSTALLATION INSTRUCTIONS

### ASSEMBLING CUSHION TILES

For large areas, make a plum line and begin assembly from there.

Make sure that all of the tabs on the tiles are facing the same direction. For example, on set of tabs faces east and one set of tabs face south. Maintain this pattern for the entire installation.

It is always easier to put a female edge on top of a male edge.

If possible, put the flat or female side of the tile up against the wall or plum line.

Use a rubber mallet and pound the female tab on top of the male tab.

The tiles go together easier if they are at room temperature as opposed to being cold.
